

To Whom It May Concern.

With regard to the ICC application for consent for discharge of drainage water into the local streams and waterways

We are opposed to a 35 year consent. This duration is far too long and should be a maximum of 10 years with monitoring requirements.

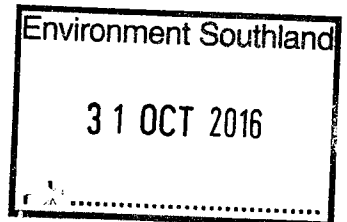

What happens if there is an exceedance in terms of remedial action and finding the source? There needs to be accountability.

What are the medium and long term plans for upgrade ? There needs to be upgrades during the 10 year consent with plans submitted and deadlines set with consequences if there is a breach.

Are there any hot spots in the consented area? These need to be targeted and treated.

There should be no amalgamation of areas to form one consent as this could slow down the much needed upgrades to the region.

Regards Roger and Rosemary Hamilton
