Environment Southland Consent Application APP 202111351 Titiroa tide gates

Thank you for the opportunity to make comment on the above consent application. The Southland Recreational Whitebaiters Assn. is involved in representing its members in whitebaiting issues. This representation includes promoting responsible use of the whitebaiting resource.

We note in the application that there was a structure in 1917 to control flooding upstream.

Also noted is the area of 1.38 ha that is lost habitat for spawning because of the present control structure.

Our members have identified that the habitats below the present gates has greatly improved over the time since the fencing of both sides of the river was put in place. Stock were once a major cause of riparian damage.

These riparian areas often flood with high tide conditions.

Would these areas still flood if the gates were removed?

We have been unable to find any information on what would be the water levels and changes if the tide gates were removed.

Our Associations concern for many years was the entrapment of whitebait in the area above the road bridge when the gates were closed. The fish were easy prey as they had nowhere to go. Up to thirteen nets could be seen in this area.

Finally, last year with our full support the Department of Conservation under new fishing regulations were able to put back pegs in place at the road bridge therefore making it illegal to fish upstream of the bridge.

This we believe will make a huge difference to the amount of whitebait moving upstream through the gates when they open.

The Southland Recreational Whitebaiters Assn. therefore SUPPORTS the consent application APP 202111351.
